Almost. Below is an edited version (changes in a different color, although the changes don’t reflect deleted words (e.g., we don’t charge publishers a subscription fee)):

Will forward you momentarily additional data on downloads.

Subject: Description of JSTOR

---

is the following accurate? Steve

JSTOR, founded in 1995, is a United States based, on-line system for archiving and providing access to academic journals. It provides full-text searchable digitized copies of over 1,000 academic journals, dating back for lengthy periods of time. JSTOR is an independent, self-sustaining, non-profit organization.

It can be extraordinarily expensive in terms of both cost and space for a research or university library to maintain a comprehensive collection of academic journals. By digitizing extensive, historical collections of journal titles, JSTOR enables libraries to out-source the storage of these journals, ensures their preservation, and enables authorized users to conduct full-text, cross-disciplinary searches of them.

JSTOR licenses all content under copyright from rights holders, and gets permission from them both to digitize the content and make the content available online. (Some materials available on JSTOR are not subject to copyright.)

In the vast majority of instances, JSTOR charges subscription fees to the libraries and universities who wish to have access to their digitized journals. In the instance of a large research university, this annual subscription fee for the various collections of content offered by JSTOR can be over fifty thousand dollars. Portions of the subscription fees are shared with the journal publishers who hold the original copyrights. In addition, JSTOR makes available some articles through its Publisher Sales Service, a program offered through participating JSTOR publishers in which journal articles are available for individual purchase. Publishers decide which articles can be purchased and set fees for their articles. JSTOR facilitates the purchase of articles from the archives on behalf of the participating publishers.
