The follow up question is why aren't Literatum blocking tools getting them at the 300 mark if they are indeed downloading PDFs. We aren't seeing anything on the blocking front.

Actually, we're still getting hit heavily, but the bad guys aren't getting PDFs anymore. Just "go away" messages. So we should leave the blocking on.

On second thought, screw em (very professional, I know). You mess with the bull, you get the horns. They are just as likely to start up again from an alternate IP and ruin my sleep tonight anyway. I'll reinstate em tomorrow morning if nothing else goes awry and let you know when I do.

The PDF download activity has actually increased since 6pm now.

Image

see the lighter red line.

Actually, MIT is the heaviest hitter right now for pdf hits with this ip: 18.55.6.215.

Any chance the offending scraper has an IP from the Portland area? We had a tool from Portland State University apologize and admit he was using 3+ PCs to mass download after they went to his house and punched him in the face (if only).

Indeed; some champs like [REDACTED] have over 1000 threads stuck there, while others have more like 50 or so.

Someday I'd like to have a month where we don't run into a thread pileup in this fine piece of software.
