Subject: [JIRA] Created: (OPS-1891) Atypon support request for scripting at Literatum Admin Tool Sessions Abuse Rule

Atypon support request for scripting at Literatum Admin Tool Sessions Abuse Rule

Key: OPS-1891

URL: [http://\[REDACTED\]](http://[REDACTED])

Project: Operations

Issue Type: Task

Reporter: [REDACTED]

Assignee: [REDACTED]

Priority: Medium

Summary: I turned the sessions by time abuse rule on to in the week after the MIT abuse recurred and the 5000 by hour caught nothing.

Rule: 1000 sessions per IP per hour = permanent block

Caught a fish in Southwest Jiatong University who were in the middle of a "trial". Only one of their many IPs that also got busted by the 300 PDF download rule. We shut down the trial and slapped them on the wrist, but I digress.

I went to unblock the 1000 sessions fella and got a Literatum based error. See screen shots and details in the Bugzilla [http://\[REDACTED\]](http://[REDACTED]) [REDACTED] is asking to run a SQL query and may need to dig deeper. Can one of you wonderful gents assist me here.

Impact: None right now, that IP can't access JSTOR and they aren't participants, but I am reticent to implement the rule until we can unblock those that get jacked. I believe we could get to a pretty low threshold that might catch MIT or MITesque activity, but I need to ratchet down further to get there.

For Fun: Can the same someone take a look at the block itself. It would be helppful to have an expert opinion on whether this fired on a per server or per server center basis. Assuming we are safe in presuming it doesn't account for MDC since MIT had no issues with the 400K.

For Style: Under what component should this live?
