Thank you both for the numbers and the heads-up. Steve

Here's what we come up with for those IP addresses and time periods.

October 9, 2010 (2010-10-09)

1. To IP address 18.55.5.100 between 18:24:02 and 19:08:01 – **8,549**
2. To IP address 18.55.7.48 between 18:24:02 and 19:07:37 – **6,352**

Also, please note that our staff member who is key to producing this data will be overseas on vacation next week and won't be very reachable.

Yes, I was also looking for the total number of downloads for each of the time periods and IP addresses (but not a list of which documents were actually downloaded).

Steve – just to confirm, were you also looking for specific #s for these IP addresses, or just interested in our ability to identify the # of downloads during specified timeframes from the noted IP numbers?

The answer is "yes". Our logging data provides time precision at the sub-second level. We are able to identify

activities between any arbitrary time bounds.

Subject: Articles Downloaded During a Particular Period

[REDACTED]

Are your logs sufficiently precise to show how many articles were downloaded to the following IP addresses between the following times on October 9, 2010 (2010-10-09)?

To IP address 18.55.5.100 between 18:24:02 and 19:08:01

To IP address 18.55.7.48 between 18:24:02 and 19:07:37

I think this information is covered by earlier subpoenas, but, again, please let me know if you disagree and need a new one.

Thank you, Steve
